

Balance Consulting LLC

This project creates an expanded base for Balance Consulting allowing them to host on-site training sessions, as well as greatly expanding their collaborative work environments.

Taking 19,800 SF of an existing building in the State Street Office Complex, the plan allows for their future expansion into the remaining 9,000 SF. The design includes several seminar spaces, a cafeteria, open office spaces, graphic design and production facilities, as well as exercise space and a racquetball court for the employees. Generous skylites are used throughout the building. The natural light enhances the well-being of the employees and increases the productivity of the collaborative work environments.
